SPT Offshore

SPT Offshore is looking for an experienced Senior Structural Engineer to support our growing organization with the preparation and execution of projects around the globe. If you like a mix of office and field work in a technical entrepreneurs environment with strong social dynamics, than this might be the job for you!

Your challenge

Always wanted to be part of something special and unique? Dive into the world of suction pile anchors and foundations by becoming part of our young and vibrant company that is constantly innovating in the field of offshore constructions. SPT Offshore undertakes and manages offshore projects for the global energy sector. As a (Sr.) Structural Engineer you will be responsible for the structural and design and structural calculations in a project. We offer you work that covers the full range of activities related to EPCI projects in an international environment. Against the background of safety regulations and offshore procedures we trigger your creativity and organizational skills to find solutions for operational challenges in the energy business.

Your duties

- In general, you will be responsible for structural design and structural calculations of offshore structures;
- Support and instruct draftsmen on engineering projects;
- Review and verify the engineering drawings and installation drawings for the project (procedures, drawings), produced by the in-house draftsmen;
- Participate in the inspection, development, testing, operating and maintenance of our unique equipment;
- Report to the Lead Engineer in a project (and to the Engineering Manager of SPT Offshore).

Requirements

- You have a higher education (HBO/University) in civil or mechanical engineering
- Knowledge and experience in the fields of maritime and offshore engineering (design codes and standards) are essential;
- You have good social skills and can easily communicate with various people from different disciplines while considering our company values and needs;
- You have a very good command of the English language, both verbally and in writing;
- You are proficient with SACS and/or Femap/NX Nastran, or you can demonstrate other relevant structural engineering knowledge, i.e. able to demonstrate hand calculations experience;
- You take ownership of the technical challenges you are facing;
- Competences such as accuracy, flexibility and team spirit are a must!
- You have a valid work permit for Europe.

Our company

SPT Offshore is the leading offshore contractor for suction pile anchors and foundations. SPT Offshore undertakes and manages EPCI project worldwide from suction pile anchors for moorings and pipelay startup, suction pile foundations of jackets and sub-sea structures to complete Self Installing Platforms (SIPs)®, Self Installing Monopiles (SIMs)® for platform extensions and Suction Installed Wind Turbines (SIWTs)®. SPT Offshore operates its own well-proven suction pump equipment required for the installation of suction piles and anchors from shallow to deep water. Over the years, SPT Offshore has been involved in the design, fabrication, transportation, installation and/or removal of over 450 suction pile anchors and foundations and various self and barge installed platforms worldwide.
